

Netsparker is the only False-Positive FREE web application security scanner. Simply point it at your website and it will automatically discover the flaws that could leave you dangerously exposed. **Eliminating the repetitive drudgery of security testing.**

Find and Exploit Vulnerabilities in Web Applications.... Netsparker's unique detection and exploitation techniques allow it to be very accurate in reporting hence it's the first and the only False Positive Free web application security scanner.

Ease of Use

We understand that you want to spend your time securing your web app, not learning how to use tools. That's why Netsparker was designed with usability being one of the main criteria's. Just download, install and start using it straight away.

Advanced Scanning

Behind its deceptively simple user interface, Netsparker hosts an advanced suite of scanning technologies that can probe deep into your web application, identifying security flaws that other products merely leave to chance.

Netsparker Benefits

Since application security is just part of your remit, you need tools that get the job done without the extended learning curve. Netsparker does just that, with an intuitive user interface and a quick-start scanning procedure that will have you testing your app in seconds.

Netsparker offers full support for AJAX and JavaScript-based applications, so you can rely on comprehensive security scanning, regardless of your choice of technology.

Let's not forget that Netsparker is False-Positive Free, which means that you won't need a PHD in security testing to verify any vulnerabilities that it finds.

With its unique **False-Positive Free** guarantee, Netsparker is the only web application security scanner that uses a built-in exploitation engine to positively confirm vulnerabilities, leaving you free to spend your time eliminating threats, not proving them.

Netsparker's **Post Exploitation** feature takes automated exploitation to the next level, revealing additional insight into your security infrastructure, that no other automated testing product can match.

With Integrated Exploitation you can manually exploit identified vulnerabilities directly from within Netsparker, enabling you to see the real impact of an attack just by clicking a button.

The primary goal of a web application security scanner is to **eliminate the repetitive drudgery of security testing**, leaving testers free to use their skills in areas where they'll make a real difference.

Netsparker boasts an arsenal of automated security testing weapons that **get straight to the point**, providing testers with the precise information they need to do their job quickly and effectively.
